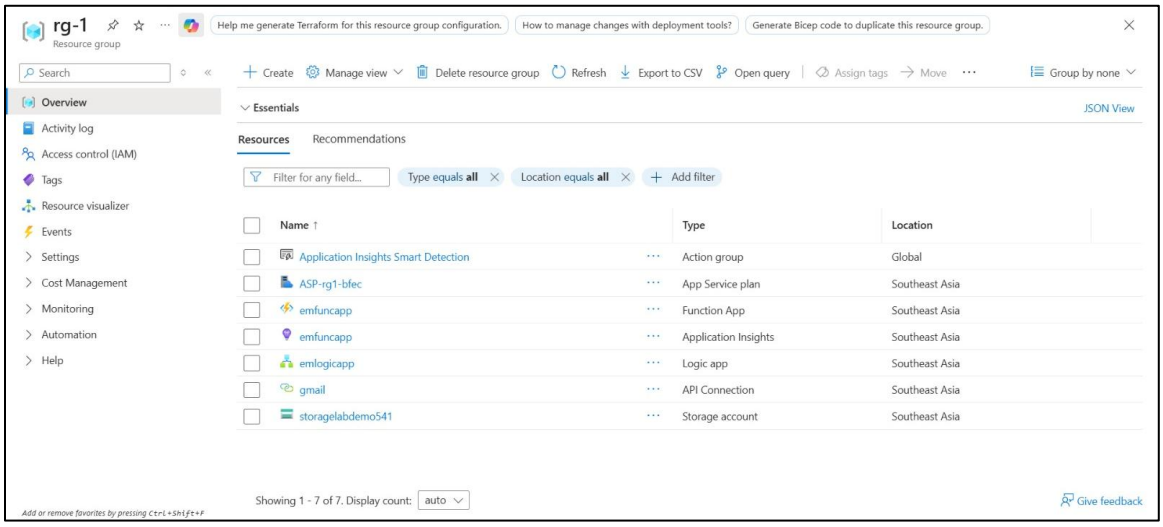
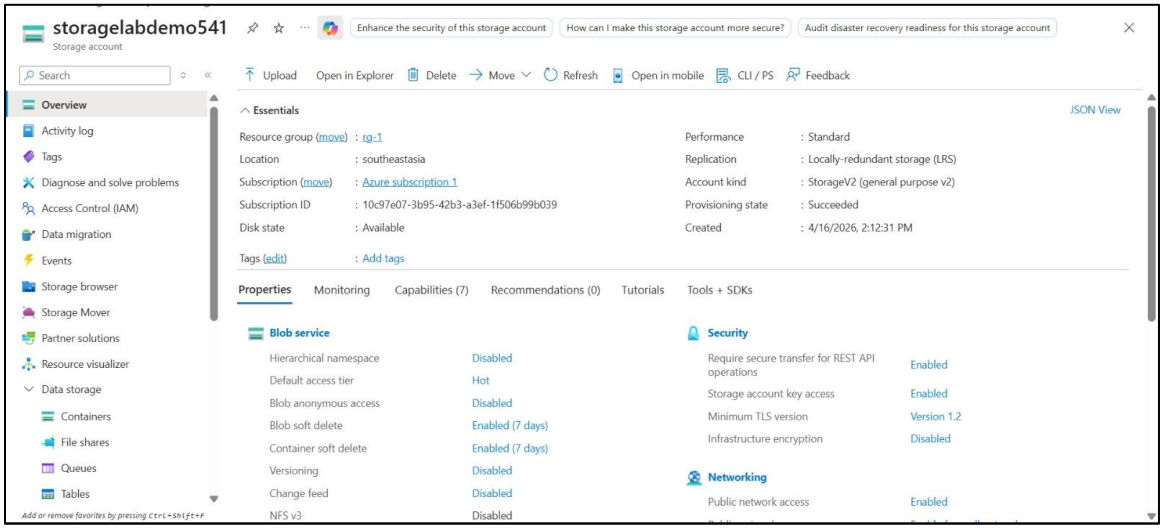
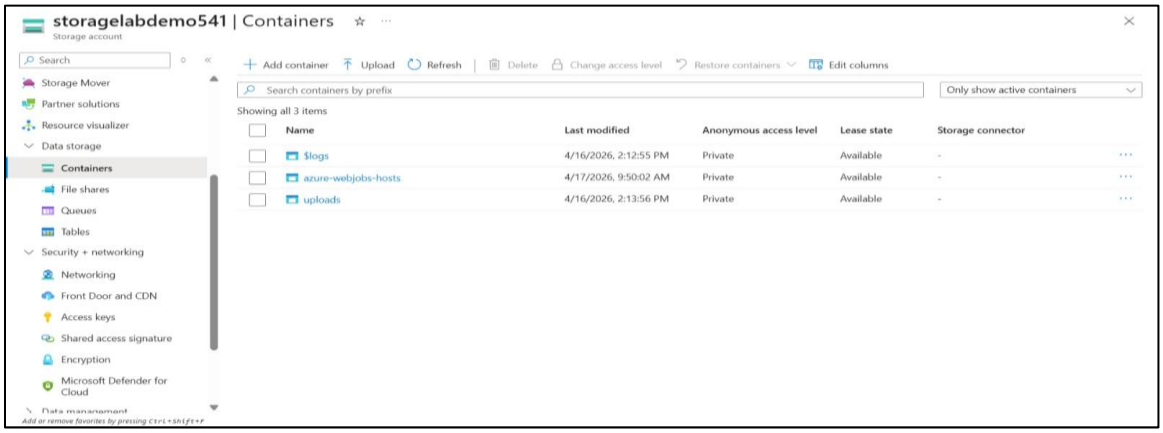
Step 1: Create Resource Group and required Azure services (Storage, Function App, Logic App).

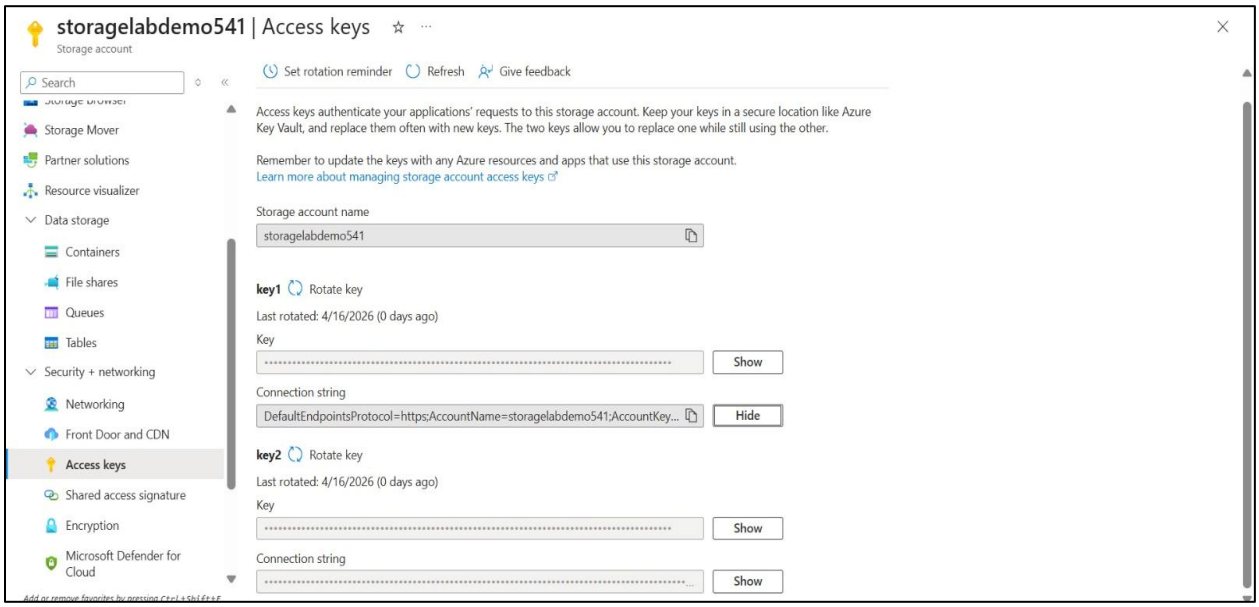


Step 2: Create Azure Storage Account and Blob Container (uploads).

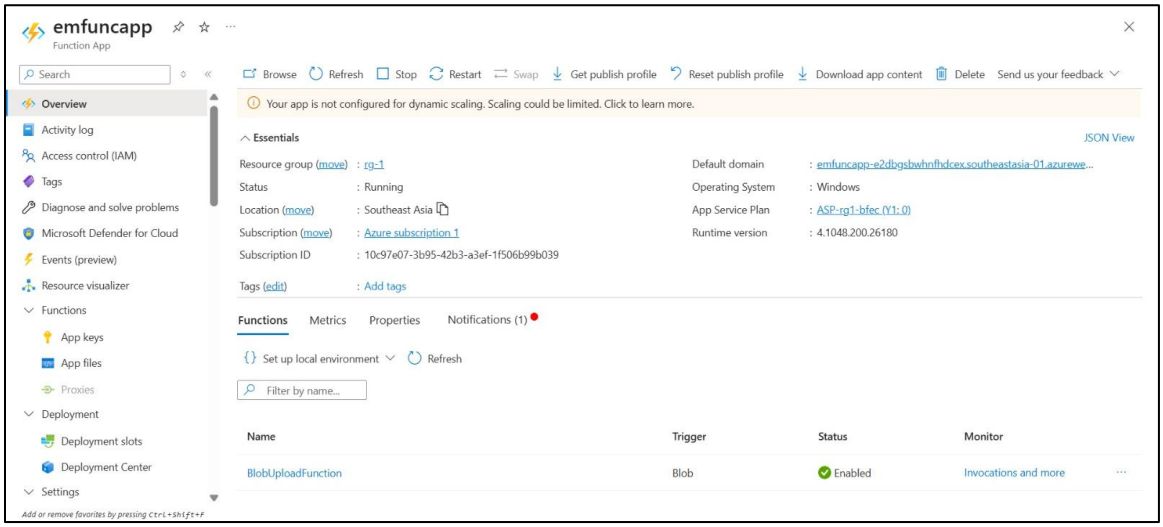




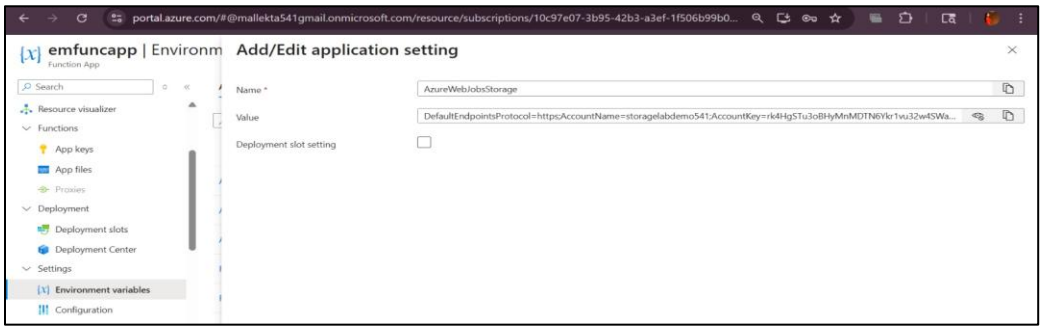
Step 3: Configure Access Keys and connection string.



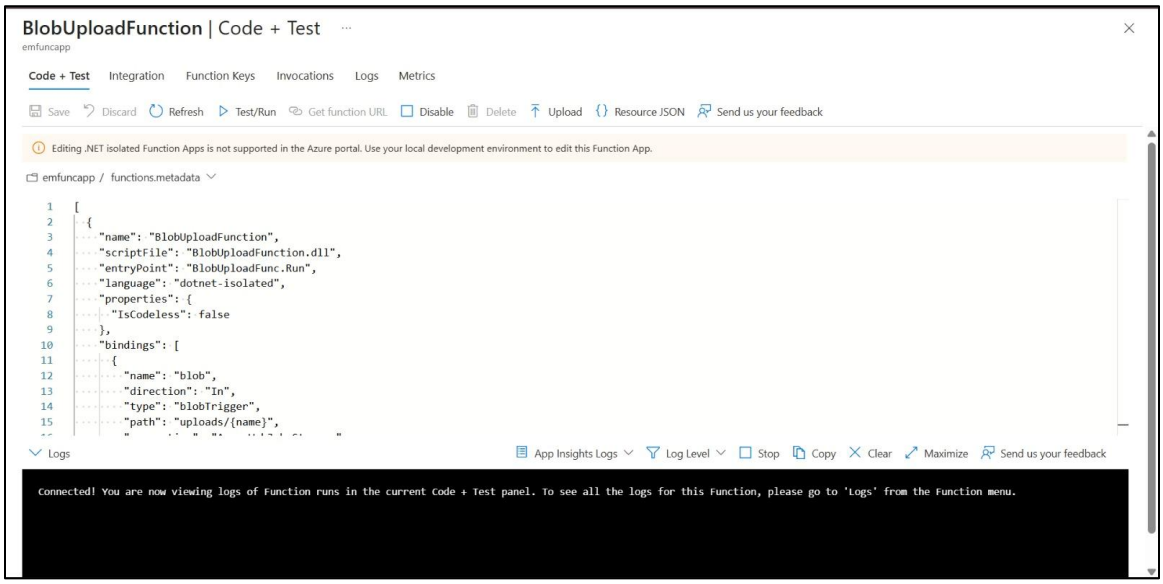
Step 4: Create Azure Function (Blob Trigger).



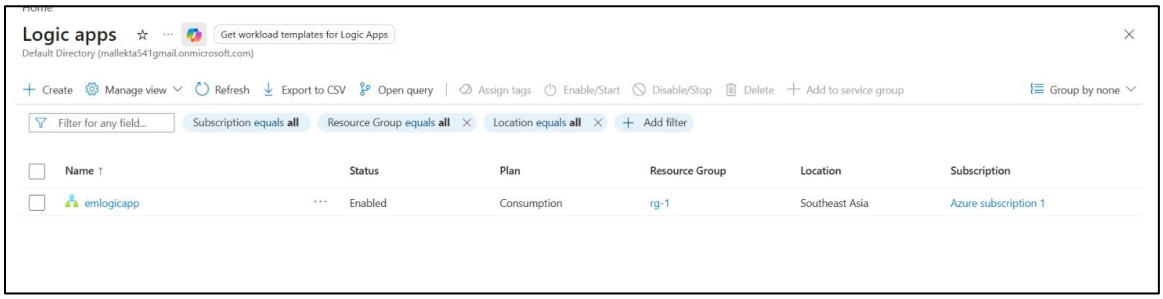
Step 5: Configure environment variable (AzureWebJobsStorage).

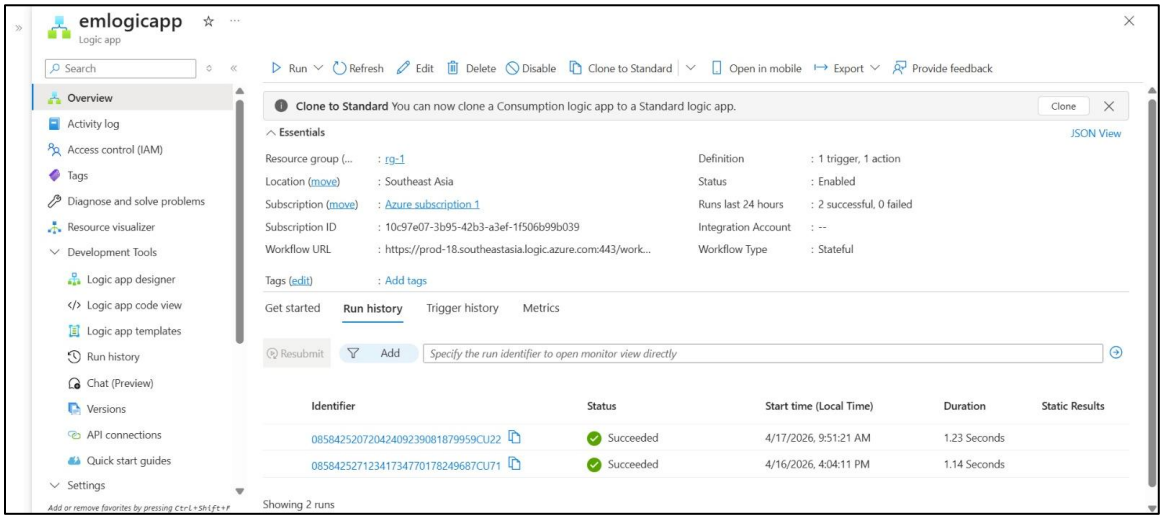


Step 6: Implement Blob Trigger function to capture file upload event.

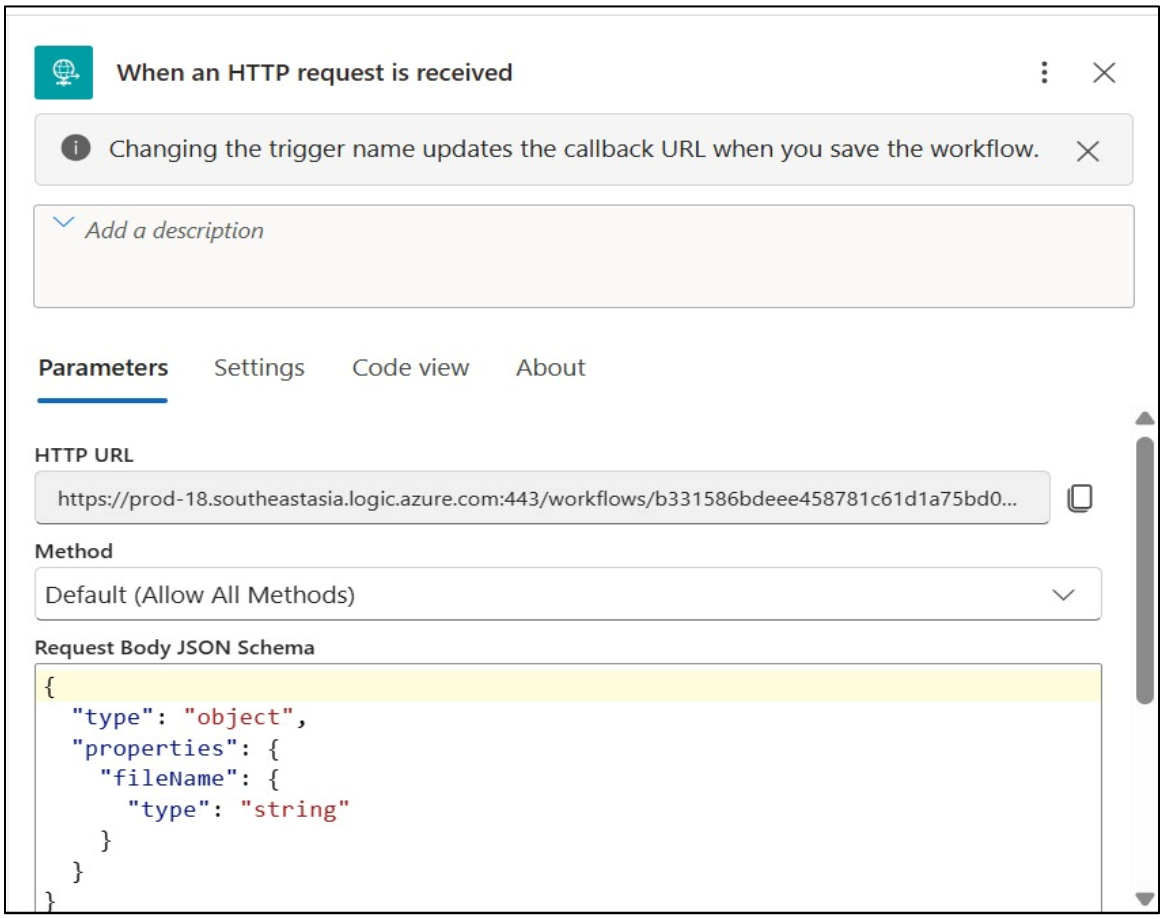


Step 7: Create Logic App.

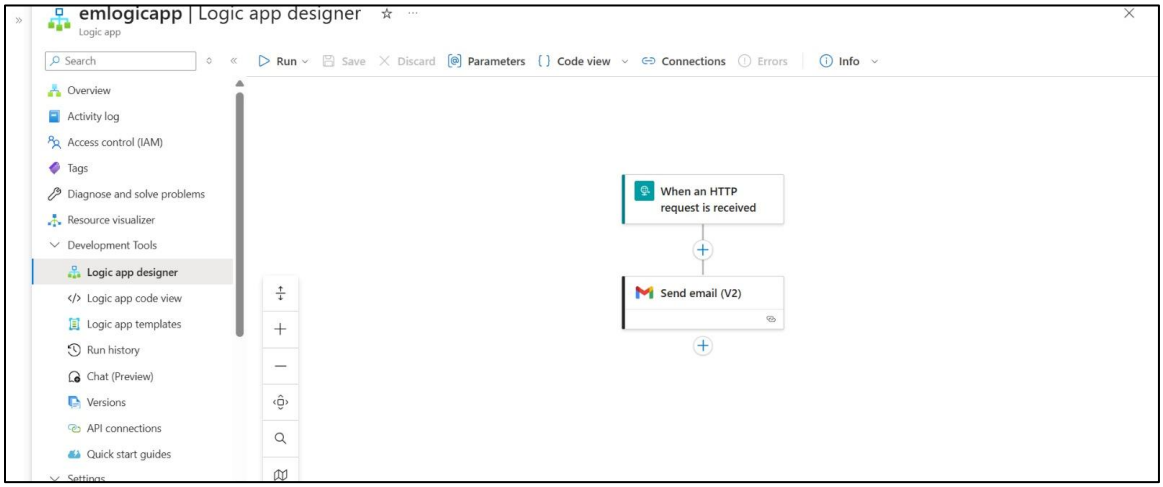




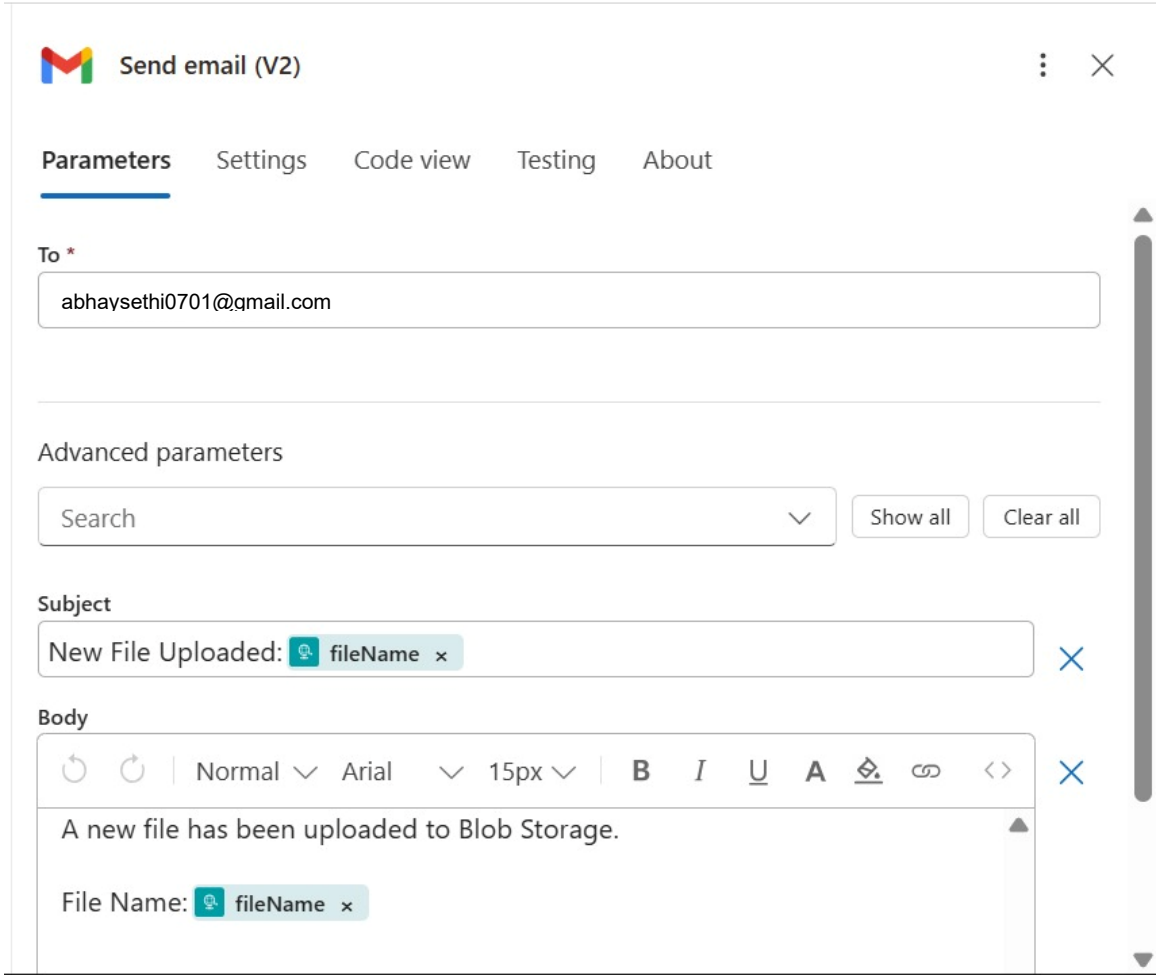
Step 8: Add trigger: When HTTP request is received.



Step 9: Define JSON schema with fileName.

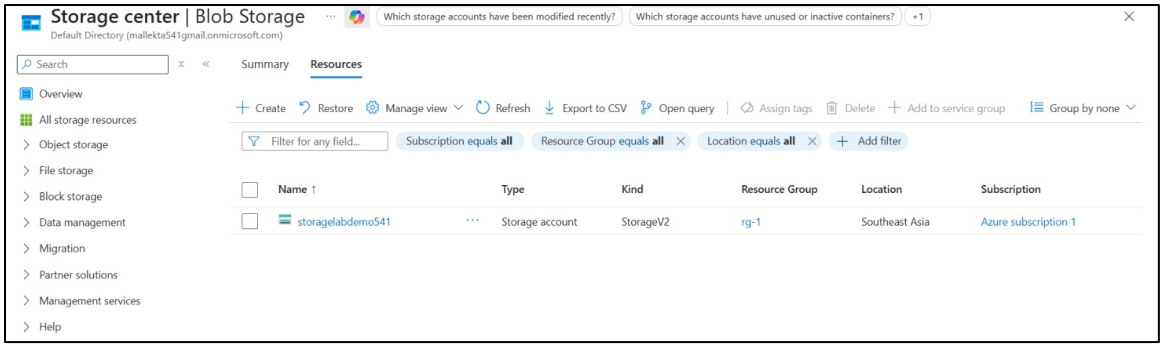


Step 10: Add action: Send Email (Gmail/Outlook).



Step 11: Connect Function to Logic App via HTTP call.

Step 12: Test by uploading file to Blob container.



Step 13: Verify email notification received.
