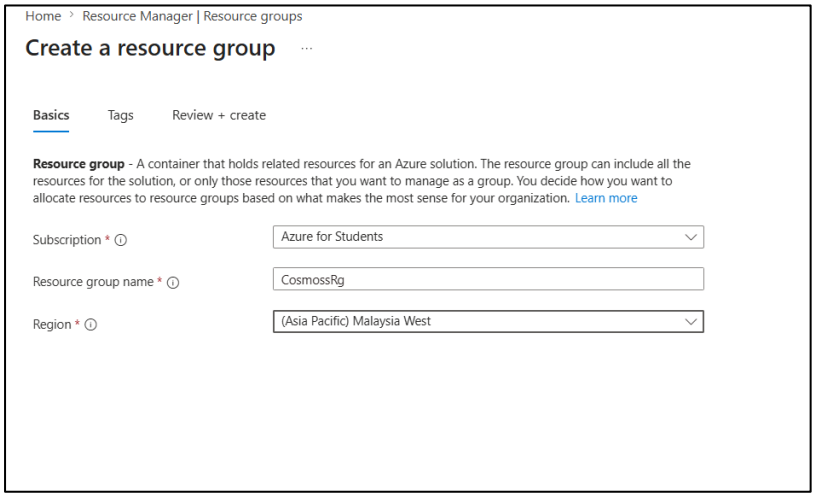
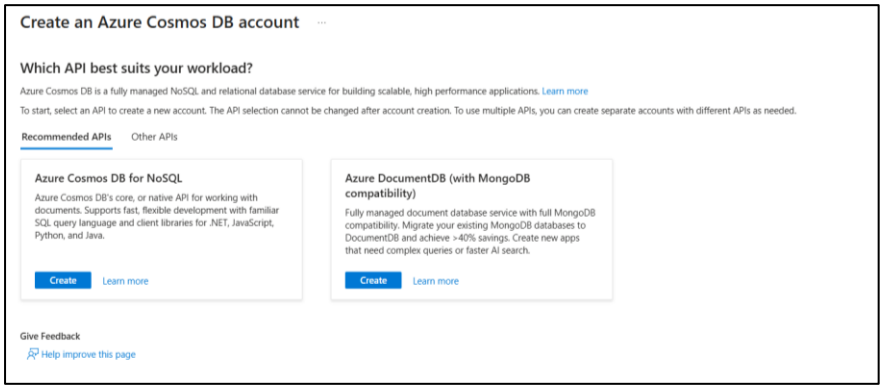
MongoDB on Azure

For that we Use CosmosDB

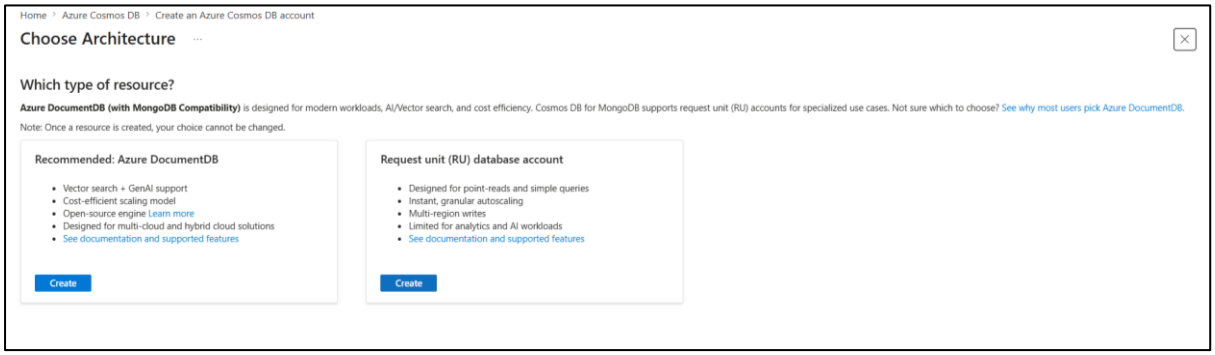
1. Create RG.



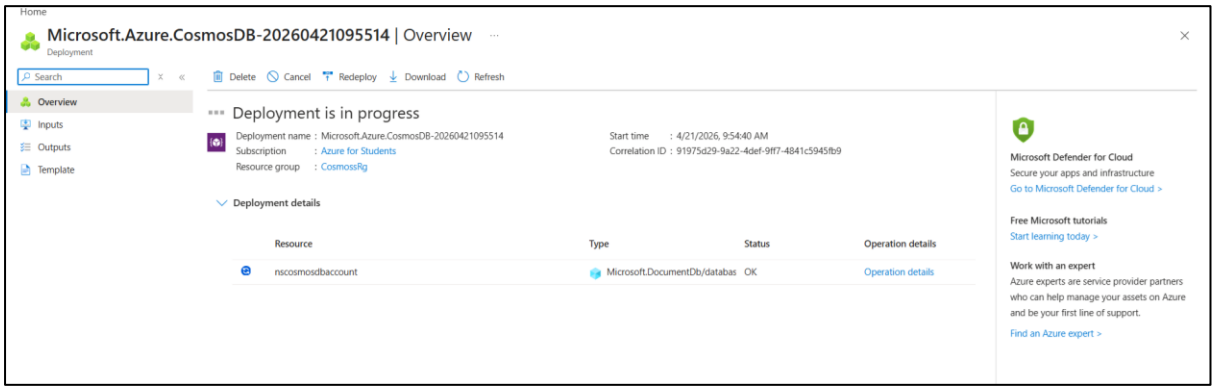
2. Now go to Cosmos DB/ Choose MongoDB



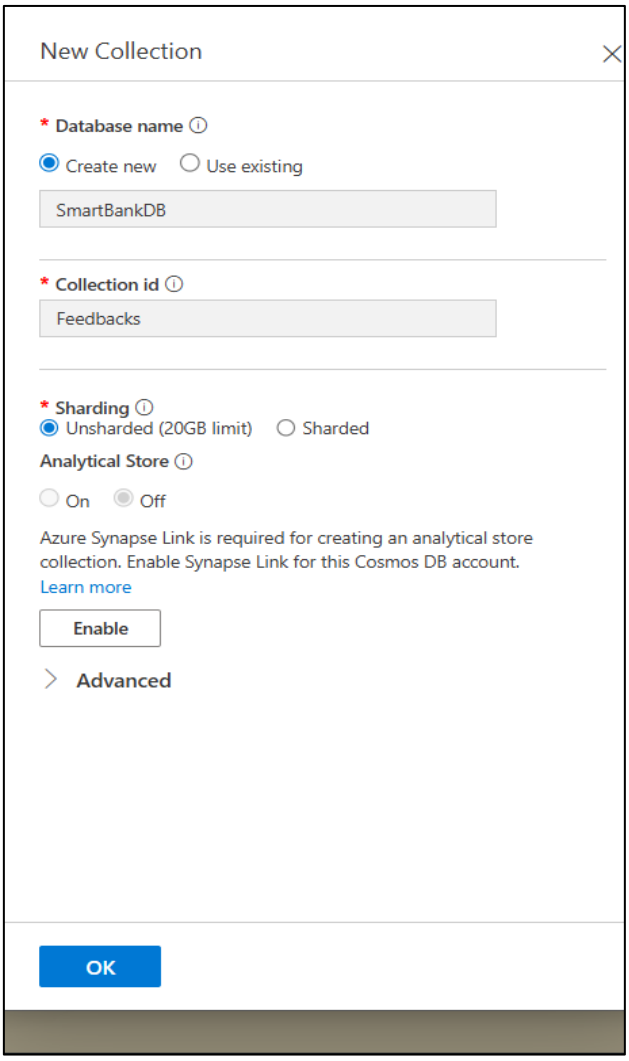
3. Click second option/ RU DB account

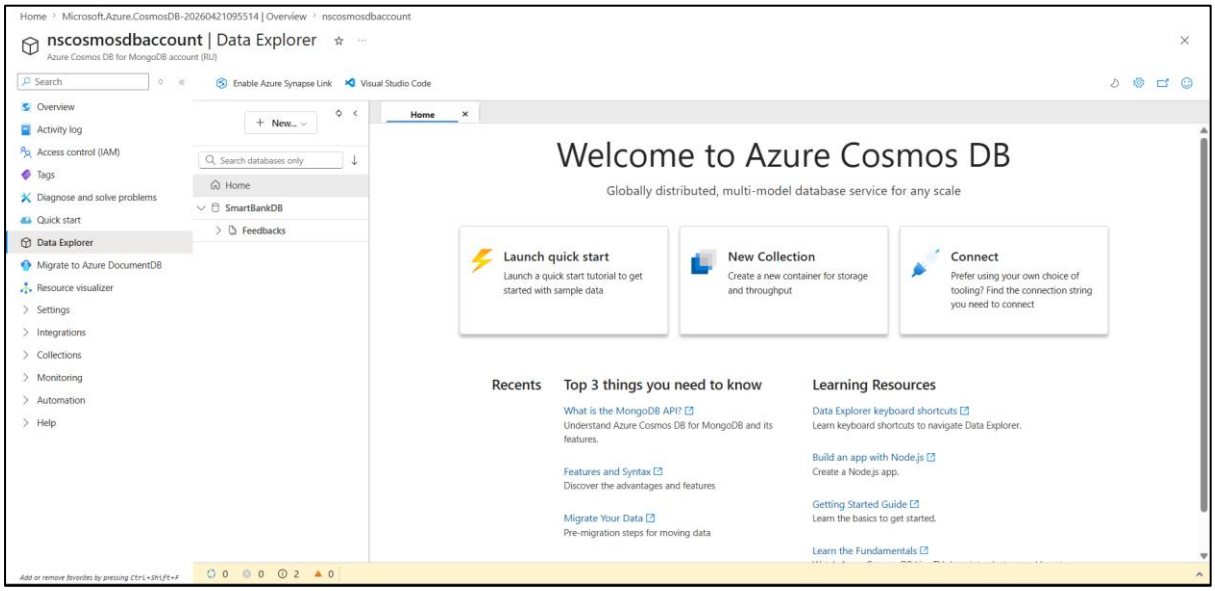


5. Deploy

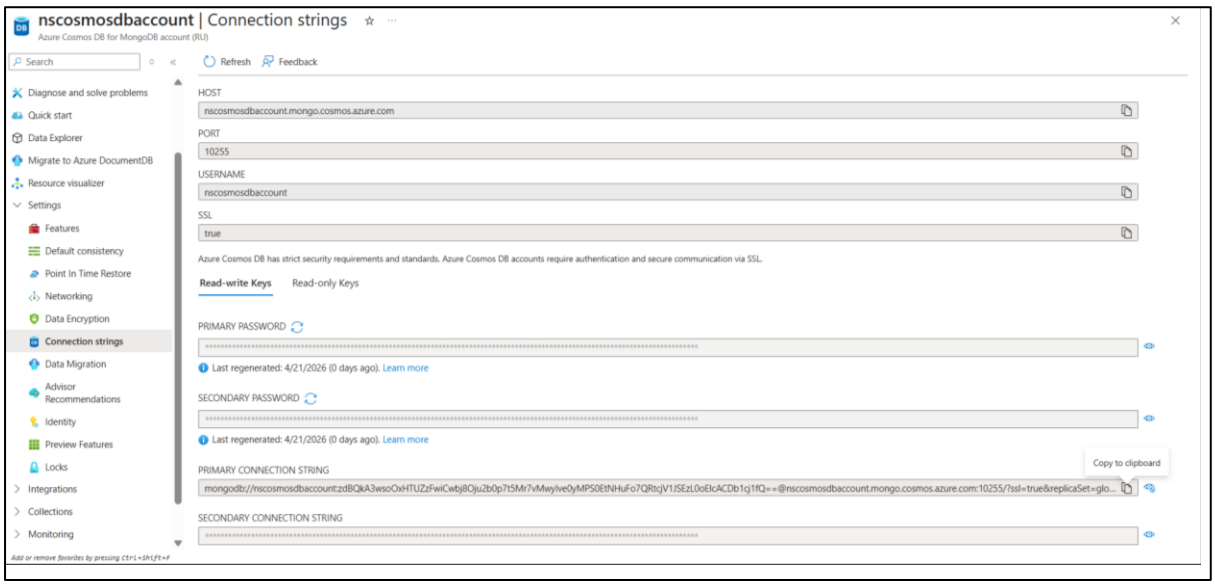


6. Create Db

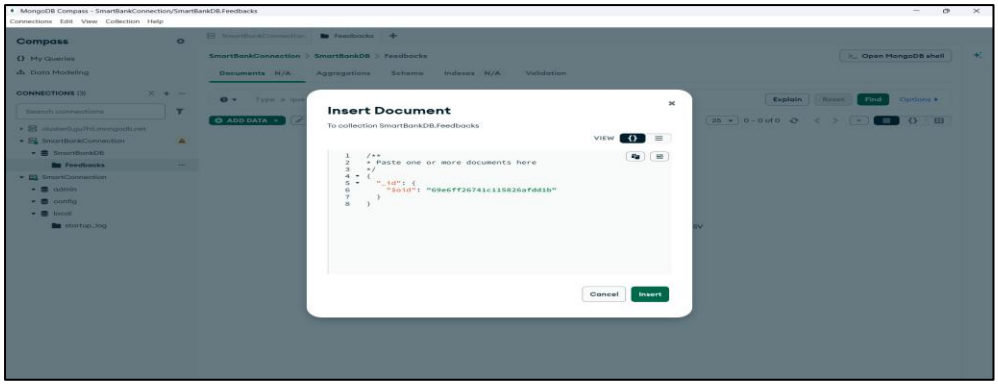




7. Connection String

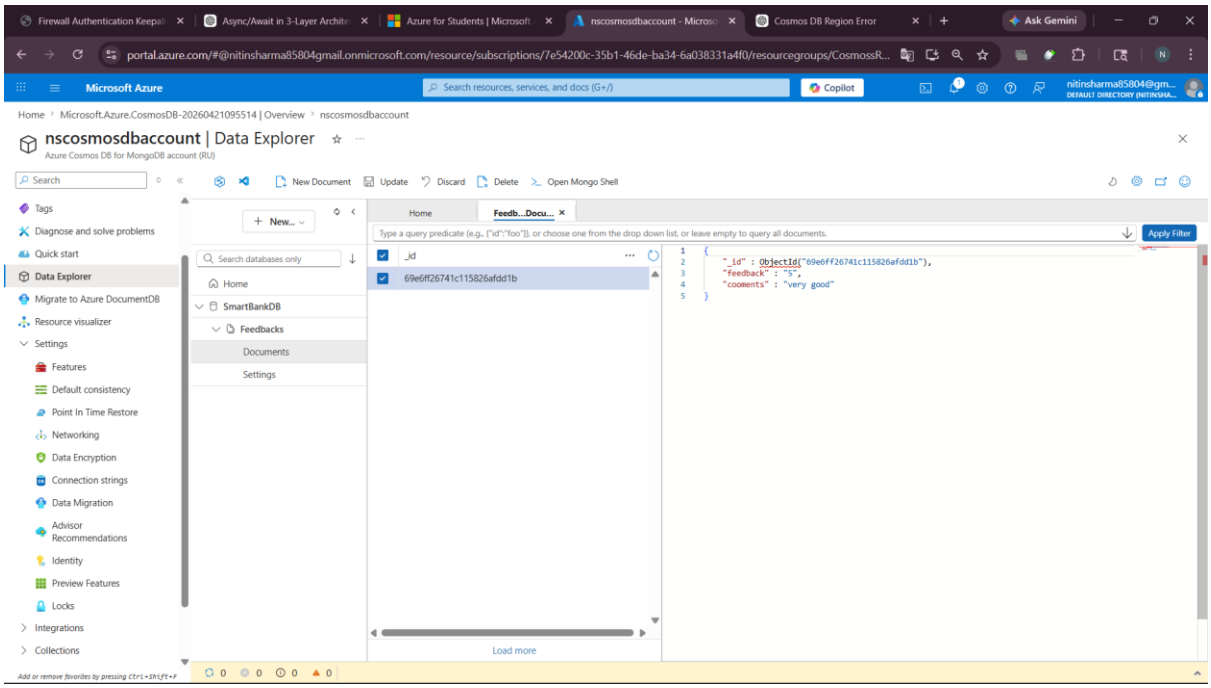


8. Insert document



9. Add data in atlas

```
_id: ObjectId('69e6ff26741c115826afdd1b')
feedback : "5"
coomments : "very good"
```



The same data is reflected in CosmosDB
